

## Quick Attach Front Hitch—BX

### Quick Attach Front Hitch—BX

The Quick Attach Front Hitch is designed to attach implements to the Kubota BX series tractors. These loaders include the LA203, LA240, LA243, LA340 and LA344.

It is an Australian design certified lifting device for Kubota supplied attachments. All orders are supplied with a detailed manual for use and routine maintenance. The Hitch is designed for easy changeover with the Australian Kubota 4in1 buckets. Changeover time is approx. 3 mins.

The Hitch can be used as a hitch receiver for towing with the bucket removed. The loader mounts are set up for the 80 series tractors. It also works with the 80 series spill guard (bucket leveling) and bucket level indicator.

An adaptor is available in store for the linkage style spill guard on earlier models. It can also be used with the loader pins from earlier models. Mounting the Hitch uses the standard pins supplied with your bucket.

For each bucket you have you will need to purchase an additional set of pins, also available in-store.
