

Tooth Bar

Tooth Bar

The Tooth Bar provides an aggressive cutting edge for your bucket. It can easily cut into surfaces and tough debris.

The multi layered teeth provide improved cutting ability while the flat rear edge allows for easy smoothing.

Made from 10mm thick 350 grade steel and supplied with grade 8.8 bolts, washers and nyloc nuts ready for installation.

Can be removed in minutes using the two attaching bolts. Does not prevent the use of "bolt on" pallet forks.

Can also be used with our 4in1 hitch receiver.

Works with 4in1 and standard buckets. Fits BX1500, BX1850, BX1860, BX1870, BX1880, BX2350, BX2360, BX2370, BX2380, BX23, BX23S, BX24, BX25, BX25D, BX2660, BX2670, BX2680, LA240, LA181, LA240, LA243, LA302, LA304, LA340, LA344 loaders

Can be made for other applications upon request.
Note: Final assembly is made to order using your supplied inside bucket measurements. Requires you to drill 2 holes in the side of the bucket for the mounting bolts.
